

## Instruments

LiBrand  
Instruments  
Item# VE-21

LiBrand NSV Instruments are the original No-Scalpel Instruments with the superior cantilever design proven in literally millions of cases.

The cantilever on LiBrand ring clamp is a critical factor in NSV's reduction in complications. As the ring clamp is locked around the vas extracutaneously, its tips spring slightly apart. As a result, they hold firmly without pinching or crushing delicate tissues.

## No-Needle Anesthesia

The MadaJet Injector  
Item# 2500-V

### How Does it Work?

The key to No-Needle is the MadaJet. It's a pen-sized, stainless steel injector that uses pneumatic pressure to deliver a virtually painless injection of anesthesia to vasa.

Nothing except the anesthetic solution penetrates the patient's skin. With the push of the release button, anesthesia solution is sprayed through a calibrated orifice. View video of the technique at [www.VasectomyStore.com](http://www.VasectomyStore.com)

### Marketing Brochures

Draw patients to your practice with No-Needle.

Item# VED-6NN
